Art 101 Lab 1

Image	Element of Interest	Possible Implementation
 Glenn Catteeuw - Visual Designer	Mouse-over interaction creates a negative of the image. Bottom of the page contains a switch that makes a nice transition between black/white to neon theme for the entire site.	I'm not sure if the background images were generated with some sort of JS 3D library or if they are images implemented in the HTML. The background moves depending on the position of the cursor on the screen, so I assume that the mouse is tracked at all times.
 Crumbskees	Game design elements such as constant animations covered by background music. Interesting color schemes.	I imagine an infinite loop for the homepage animation that is interrupted after the "Play Now" button is clicked. Music may be imported from a file or an external source in JavaScript.
 weedensenteret.no	The interactive market element is the most interesting part of this website. When the client scrolls down through the welcome screen. A 3D scene of weed related objects appears. It's almost as if the user were strolling past a virtual weed stand. I think it emulates the in person shopping experience well.	At some point, someone created and rendered a collection of 3D assets in a modeling software. After that, I'm guessing the 3D animation, which is interactive to an extent, was turned into a scroll wheel controlled gif.

 <p>Inside the Mind of Samuel Day</p>	<p>Story-telling via scrolling webpage. Passing a mouse cursor over certain parts of the page reveals links and hidden images. Customized cursor tracked by characters on the screen.</p>	<p>Animations move frame by frame according to the extent to which the scroll wheel is used. Clicks are tracked revealing funny phrases.</p>
 <p>luckyfolks.fr/404</p>	<p>This 404 error page is special in that it brings character to a page that often makes the user feel discouraged. In french, it tells the user that it's not so serious, and offers a link to the prior web page.</p>	<p>I think it's just a simple text line that's positioned in the middle of the page.</p>
 <p>adidaschile20.com/bomber/1</p>	<p>This website feels like an interactive commercial. Studio lighting and a detailed 3D model of the product give this website a beautiful look. It has a consistent palette and level of detail throughout the entire website experience.</p>	<p>The lighting and 3D elements were made in a modeling software, using light tracing and texture modification. The scrolling function might've been incorporated using a bunch</p>

Summary of Efforts

One solution we came up with, in terms of communication, was using a Discord call while completing the assignment. We wanted to use a table for our website reflection in order to organize our thoughts and make it easier to read. Also, we decided to work in google docs first because it's a platform where two people can work at the same time. We planned to download it as a pdf document in order to submit the assignment. We're still getting familiar with the format of the class, but the challenges are minimal. Instead of using the link that was on the website, me and Francisco used instructions from Danielle, who posted them on Discord.
