ART101 Lab 2

Description	Image
Task 3: HTML code	

Task 4: HTML in browser	
Task 5: CSS code	

Task 6: Styled HTML in browser	
Task 7: Styled HTML in browser with inspect window	
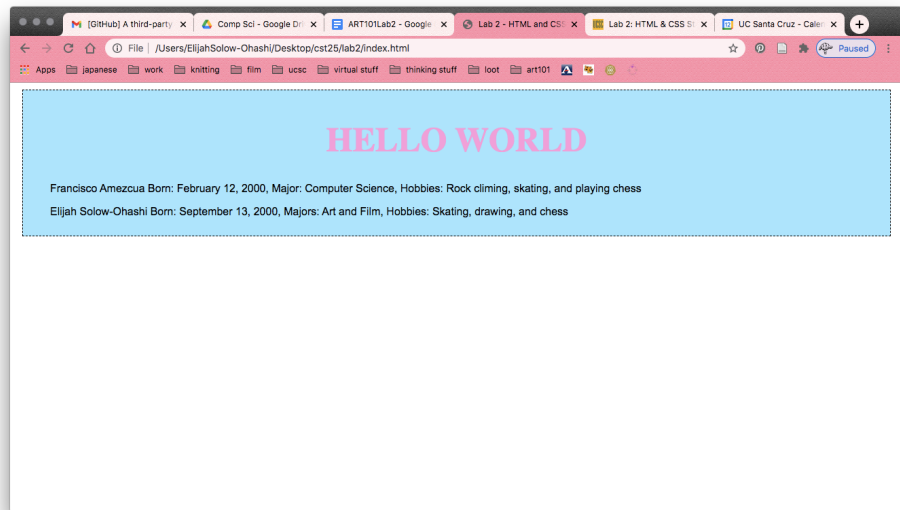

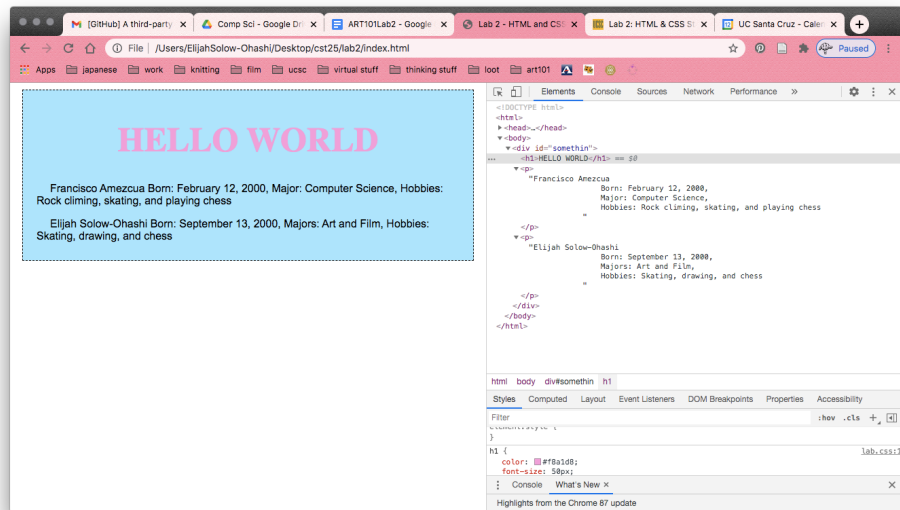

Task X: Styled HTML using the url	
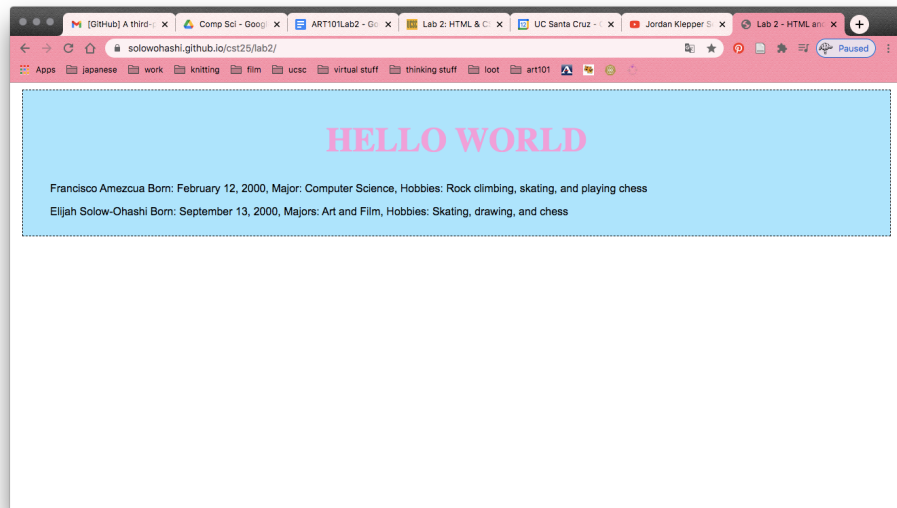

Summary of Efforts

Again, we decided to communicate over Discord in order to complete the programming assignment. Pacs directed Elijah while he wrote in the code. We ran into an issue at the end of the assignment when we tried to run the code in our browser. After a few minutes, it worked. But we never figured out what we changed to make it work. Other than that, we don't know how the lab could have gone better. Pacs copied the code to be pushed to his own GitHub, however, although the code is exactly the same, the layout shown is not the same as Elijah's. It's interesting to see how we can add onto our code to create more complex and interactive sites using HTML and CSS. Getting the indentations correct and navigating the HTML tags was a small issue that didn't take much effort to fix. We desired some clarification to the margin/padding elements that we saw in the example CSS code.
